

COMMERCIAL PROPOSAL

ZEST Corporation offers execution of orders for Video-computer psycho diagnostics and psychoanalysis (VCP). VCP favorably differs from other methods of obtaining information about a person, such as: polygraph (lie detector) testing, interviewing by psychologist or various computer tests where the examinee should play an active role and his/ her consent is required:

- Polygraph testing defines only true answers of the examinee to the questions without 100 % guarantee; polygraph testing examines the case while VCP method focuses on properties, which are mutually complementary.
- Deliverables of the Interview by a psychologist are subjective since depend not only on professionalism of the psychologist but on various external factors (season, weather, temperature in the office, lights, sympathy of the psychologist and the examinee to each other, their state of health, self-satisfaction on that day, time of interview, whether the examinee is hungry or not, sick, tired, etc. and magnetic storms at last).
- Errors at various computer tests may be related both to all the aforesaid reasons and imperfection and non-universal character of computer tests, which are also made by psychologists for certain groups of people with definite stereotype of thoughts and mentality but applied to everyone without any exceptions.
- VCP can be carried out by a photo anonymously, no information about a person under consideration is required to VCP expert; VCP has no subjective errors of the methods described above; VCP is efficient, authentic and based on scientific analysis.

VCP is carried out by competent experts, specially selected and trained by the founder of this method, A. Anuashvili, member of the Academy. The experts have a Certificate of the approved sample granting a right to deal with VCP professionally.

Earlier VCP was available only to special departments of National security structures, military intelligence and security service.

Today VCP can be applied at top state level, in the largest corporations and holdings to get anonymous psychoanalytic data on TOP-management and staff, the operative information on opponents prior to serious meetings and negotiations. VCP helps to select personnel, define weak points in the management team in advance, latent threat, dissatisfaction and irritation, different kinds of addictions and pathologies, to plan negotiation strategy to achieve proposed results, and even prevent acts of terrorism.

VCP will help enrollees and students advising on the issues of development and harmonization of personality, vocational guidance, optimization of a psychological climate at dialogue with others.

For execution of the Order you just have to pay for it and send us a photo of a person by e-mail (without any additional data). Requirements to quality of the photo: the Image should be clear with good sharpness, full face (placid-faced), eyes should be visible (approximately like on the passport).

Performed order (2 Microsoft Office files) shall be sent to the customer by e-mail from which it has been received:

1. Microsoft Word file "Results of VCP" represents a detailed psychoanalytic report containing following sections:
 - Psychological type of a person under consideration,
 - Relative development of intuition and logic,
 - Stability of mentality,
 - Harmony of the personality,
 - Religious potential,
 - Forecast of behavior in an extreme situation (display of instincts),
 - Forecast at deterioration of condition,
 - Recommendation on harmonization of personality,
 - Recommendation on vocational counseling,
 - Time perception,
 - Psychological compatibility (mutual understanding) of the person with 49 psychological types.
2. Microsoft PowerPoint file contains:
 - Mental and spirit portraits created by the program, with color table of 49 psychological types and place of the person under consideration on it.

Yours faithfully,

Sergey Entin
